

Hydrometrix has long been a full-service specialist in underground leak detection and repair. We take great pride in our quality of workmanship, as well as our quick and cost-effective turnarounds for underground municipal, commercial and industrial water reticulation networks.

Active leak detection is a cornerstone of water loss management and non-revenue water reduction initiatives. Our services result in significant water and financial savings and our clients can enjoy a financial return of 5 to 8 times the cost of our service.

Key to our success is the full management and quality control of every task, from detection of the leak to its repair. We create additional value for our clients by using our innovative web-based data management system for the recording and analysis of leak locations and repair progress.

### Application

- Water reticulation systems
- Institutional, commercial & industrial water networks
- Industrial product lines
- Agricultural irrigation systems
- Residential estates
- Bulk water mains

### Key Success Factors

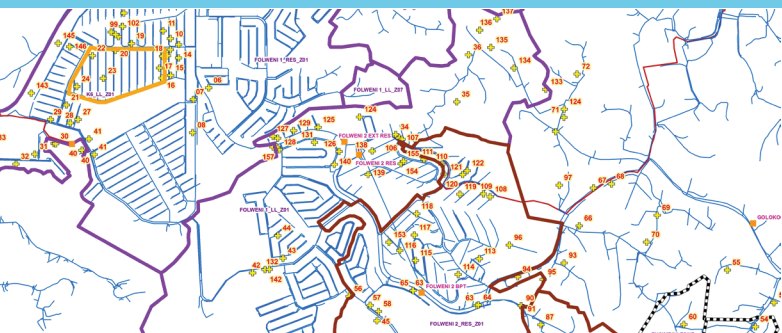

- Experienced, well trained & motivated staff
- Use of the latest leak detection technologies
- GIS based leak reporting platform
- Cloud hosted project reporting
- Leak status tracking
- Quality management of repair work
- Professional engineer management

### Experience and Track Record

- > 70 000 km of municipal water reticulation surveyed
- > 166 000 000 litres of water saved per day
- > 10 multi-year municipal leak detection contracts in South Africa

- > 80 000 water leaks detected
- > 18 000 non-visible leaks detected

Our services extend beyond South African borders. We have successfully completed assignments in Botswana, Lesotho, Zimbabwe and Ghana
